

United Capital Sukuk Fund | Monthly Fact Sheet

August-22

FUND OBJECTIVE

The objective of the fund is to provide investors with a low-risk investment with stable and competitive returns through investments in short, medium and long-term Sharia-Compliant securities and investment products, whilst ensuring the preservation of capital and maintaining a reasonable degree of liquidity.

The Fund aims to provide its Unitholders with halal profits on the growth of their capital over the long-term in accordance with the principles of Islamic finance.

MARKET REVIEW, OUTLOOK AND STRATEGY

The Debt Management Office (DMO) conducted its August FGN bond Auction with a total of N225.0bn on offer across the MAR 2025s (3-year bond), APR 2032s (10-year bond) and JAN 2042s (20-year bond). Investor's sentiment toward the auction was mild, with total bids closing at N247.1bn, implying a bid-to-cover ratio of 1.1x. We note that investors' bids remained skewed toward the 2042s with a subscription rate of 2.4x. The 2025s and 2032s were undersubscribed by 0.3x and 0.5x, respectively. The auction was again undersold with an allotment rate of 0.9x, as total DMO sales printed at N200.6bn vs N225.0bn on offer.

In line with our expectations of a continued uptick in the yield environment of the sovereign bonds market, marginal rates across all the papers on offer climbed 1.5ppts, 50bps, and 25bps, to print at 12.5%, 13.5% and 14.0%, respectively. Overall, investor sentiment was relatively standoffish. As inflation pressure intensifies, rising interest rate expectations across central banks of advanced economies and other political risks began to bite even harder, thus forcing investors to demand even more for their funds.

Conversely, the secondary market was met with bearish sentiment, with most of the trading activity around the auction papers. Average secondary bonds yield for August climbed 92bps to print at 12.8%. Similarly, in the corporate bonds market, average yields rose 1.2ppts m/m to close at 13.9% in tandem with the rising yield environment. Similarly, the FGN Sukuk bonds traded in tandem with the other fixed income secondary market instruments, as the average Sukuk yield recorded a 1.2ppts m/m climb to close at 12.6% at the end of August.

As we advance into subsequent auctions, we expect marginal rates to retain the current ascent, as we believe investors will remain aloof. To attract fund managers' interest, the DMO will most likely succumb to higher rates on all subsequent offerings amid FG's increasing debt appetite. Also, we maintain that another hike in September's MPC meeting will only increase investors' appetite for higher rates. We expect coupon payment to the tune of N351.9bn to hit the system in September, which is expected to cause a stir in the system's liquidity status, thus somewhat leading to a downside to our expectation for higher yields in the bonds market amidst a liquid financial system.

Benchmark	3-Yr FGN Sovereign Sukuk Yield
Risk Profile	Medium
Investment Style	Income Oriented

PERFORMANCE REVIEW

In August, the United Capital Sukuk Fund gained 0.62% and thus, brought annualised YTD return to 7.25%, relative to the annualized return of 12.21% posted by the benchmark for the same period.

The Treasury bonds secondary market remained bullish as investors continued bargain hunting on select instruments, especially at the short spectrum of the benchmark curve. Thus average yields declined across the curve. The average yield was lower at the short and long end as a result of demand while yields expanded at the mid segment following sell-offs.

The Fund maintains sufficient exposure to FGN Sukuk, money market instruments and sub-sovereign and corporate Sukuk with significantly higher yields. We will maintain current allocation to enhance returns for the Fund.

* Inclusive of management fee; Returns are net of all fees

Governance Asset Allocation Ranges:

Non-Interest Bank Deposit (20%-40%); Sukuk Bond: 60%-80%

Why choose the Fund?

- Not exposed to equities market volatility
