

United Capital Fixed Income Fund | Monthly Fact Sheet

September-22

FUND OBJECTIVE

The main objective of the Fund is to achieve consistent income streams through investment in select portfolio of securities and investments specified in the Trust Deed. The Fund's assets are invested in Federal Government bonds, Sub-national bonds, corporate bonds and high quality money market securities. The Fund is not affected by the fluctuations in the equity markets. However, opportunities for capital appreciation are dependent on changes in interest rate.

MARKET REVIEW, OUTLOOK AND STRATEGY

In September, the Debt Management Office (DMO) conducted its September FGN bond Auction with N225.0bn worth of papers on offer across the following instruments: MAR 2025 (3-year bond), APR 2032 (10-year bond), and the newly issued APR 2037 (15-year bond). At the auction, investors' demand was relaxed, as the majority was skewed toward the tail-end of the curve, with total subscription printing at N246.4bn and a bid-to-cover ratio of 1.1x. Interestingly, the newly issued 2037s (coupon rate: 16.25%) attracted significant interest from investors as the paper was oversubscribed by 1.9x, while both the 2025s and 2032s were undersubscribed by 0.6x. Notably, the DMO oversold the auction, allotting a total of N229.2bn vs 225.0bn on offer. In line with overall market expectations of a continued uptick in the yield environment of the sovereign bonds market, marginal rates across the 2025s, 2032s, and 2037s climbed by 100bps, 35bps, and 50bps, to print at 13.5%, 13.85%, and 14.50%, respectively.

In the secondary market, overall investor sentiment was bearish, with the bulk of the trading activity around the newly issued 2037 paper. Investors' interest was dominant across the short, and long end of the curve as market participants sought to cover and rebalance their portfolio positions. Thus, average yields climbed higher to print at 13.3% in Sep-2022, a 50bps m/m increase from Aug-2022 print of 12.8%. For corporate bonds, average yields at the end of Sep-2022 climbed 36bps m/m to close at 14.2%, in tandem with the rising yield environment. Similarly, the FGN Sukuk bonds closed bearish as average yields on Sukuk bonds increased by 48bps m/m to close at 13.32% compared to the previous month.

Going forward and taking a cue from recent auctions, we expect marginal rates to trend higher as the DMO will cave into offering higher rates to attract fund managers. In the secondary market, we anticipate that bearish sentiments will continue to dominate to match the uptick of the increase in MPR as investors remain standoffish to the market and demand higher yields on bond instruments.

PERFORMANCE REVIEW

For the month of September, the United Capital Fixed Income Fund gained 0.51% and Year to date ("YTD") annualized return printed at 6.33%. The benchmark posted an annualized return of 13.13% for the same period.

The Treasury bonds secondary market remained bearish following the MPR hike to 15.5% and liquidity dearth by the CBN. Thus average yields expanded driven by profit taking activities across the short, mid and long end of the curve.

We reiterate our view of an uptick in bond yields in the medium term, as both the FGN's borrowing plan for 2022FY and expected fiscal deficit point towards an elevated supply

The Fund maintains sufficient exposure to FGN bonds, money market instruments and sub-sovereign bonds with significantly higher yields. We will maintain current allocation to enhance returns for the Fund.

Maturity Profile of Assets

<1 yr	14.7%
1-3yr	3.1%
3-5yr	30.9%
5-10yr	32.1%
